

# wind energy technician certificate program begins in January at High Plains Tech

## *Interested in a new career?*

Take a look at the new Wind Technician Certificate Program beginning in January, '09 at High Plains Technology Center.

**It's flexible.** Each class is scheduled in the evening, which allows students to continue on with their normal busy schedules, yet still find a way to upgrade their skills in an exciting new industry.

**It's fast.** Our plan is to develop a program which awards a wind technician certificate in seven short months -- again through meeting once or twice a week at night.

**It's affordable.** Based on their individual situations, students can choose their timelines for completion. For just a little over \$2,100, your career can change . . . your life can change.

## **Wind Energy Technician Certificate**

### ***Program Overview***
